

ABSTRACT

The invention relates to an apparatus for dispensing of stacked objects in a predetermined dispensing direction, the dispensing apparatus comprises at least one guiding means intended for guiding the stack of objects and at least one dispensing unit intended for
5 repetitive dispensing of at least one object at a time. The dispensing unit furthermore comprises a first supporting member and a second supporting member intended for supporting a first object and a second object, respectively, of the stacked objects, where the first object is an object being an outermost object and intended for immediate subsequent release in the predetermined dispensing direction, and where the second
10 object is an object being an object neighbouring the first object and situated between the first object and the remaining stack of objects.
